THE DIFFERENCE IN REVERB™

Reverb™ by ExpoDisplays is a pop-up display with silicone edge graphics (SEG) that are inserted into a grooved frame channel for a seamless finish. But that's not what makes it so special. The LED light curtain with its strategic location within the frame is what makes Reverb™ stand out on the show floor.

VISUAL IMPACT GUARANTEED

Tension fabric graphics printed with dye-sublimation and perfectly stretched and fastened with SEG.

BRIGHTNESS UNPARALLELED

LED curtains hang inside the frame illuminating the graphic from within.

EASY TO TRANSPORT

A compact solution, Reverb™ can be transported in a wheeled bag.

For more durable, protective packaging, choose our SC90 or SC50 wheeled cases to transport your Reverb™.

ACCESSORIES AVAILABLE

Stabilizing foot

For high traffic areas and frames with accessories.

LED Lighting

The LED spotlight is brighter than a halogen spotlight and much more energy-efficient!
